DETAILED ACTION

1. Claims 4-35 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim can not depend on a multiple dependent claim. See MPEP § 608.01(n).

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

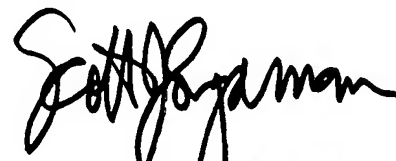

3. Claims 1-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Flanders et al (6671078). Flanders et al disclose in figs. 4A and 4B a micro light modulator that is acting as a controllable shutter, but there is no showing in the light path a translucent modulator substrate and that the substrate has the controllable shutter anchored to it (it is not clear that this is the case in figs. 8A and 8B), however, this is a design choice that one skilled in the art would make depending on the optical path needed or saving manufacturing steps of making a hole in the substrate. The use of microlenses are well known to focus the light. The thickness of the substrate is a design choice depending on how translucent one wants the substrate to be. The type of material the substrate is made of is a design choice depending on the strength and translucency need in the specific application. The wavelength of the light source is a design choice depending on the specific use the system will be used for.
